

CROP - PANORAMA

M7. For several years, the leaders of several industrialized nations have been meeting regularly to discuss climate change. Some people believe that human activity is the cause of climate change (global warming etc.); that climate change will have a significantly negative and irreversible impact on quality of life. Others believe that this point of view is a complete exaggeration, that the observed climatic phenomena are simply caused by nature, that they are normal and pose no great danger to the Earth. Which of the two points of view are you more inclined to believe?
