

## Values and mindset of the people who would vote for a populist politician

---

Feelings of exclusion, disconnection, lack of control over one's life, pessimism, trouble living in our current era and adapting to a society in flux, etc.

Social diversity as a symbol of this new threatening world.

Feeling that one's personal potential is limited or blocked by this new overwhelming world over which one has little control (particularly among the most enthusiastic about a populist politician).

Traditional vision of society, the couple, the family, relations between men and women.

Nostalgia for a world where everything seemed simpler.
