

Values and mentalities of the people who share an apocalyptic view of the world

A *dystopian* view of the big issues plaguing society today: the ecological threat, a society changing too fast, growing social inequality, life ruled by the law of the jungle, fatalism, cynicism (“*everyone is lying to us!*”), etc.

Anxiety about the impact of today’s world on their personal situation.

Feeling a loss of control over their lives.

Great social awareness, a desire to get involved, to help change the world.

An apocalyptic view transmuted into a project of social, ecological and ethical transformation.
